

AI Usage Statement

We have used AI throughout working on the project. It was mainly for research purposes to learn about the new concepts or understand a basic know-how on their implementation. All committed code is explainable by us.

These are the different example prompts that we have used:

- Can you explain kubernetes deployment in simple terms?
- Does my file look correct?
 - By file we mean any yaml file like kubernetes objects/resources, ansible playbooks, etc)
- Why do I get a python error when trying to install MetalLB on the provisioned cluster?
- Can you format this .md document for me?
- Hey chat, I am having a problem understanding the error no datasource is found in Grafana can you show what the problem is
- Can you explain the difference between the different networking types in Kubernetes?
- This yaml file has syntax errors can you fix it for me
- Explain this assignment to me
- How to set up basic functionality for xyz
- How is Grafana connected to Prometheus?
- How are services and virtual services related?
- Can you explain the difference between ingress and Istio?
- Why do we need deployments instead of pods?
- Hey, I have those ideas for the metrics types. Which of them are suitable for this project?
- What is the definition of xyz?
- How to create a Histogram in Grafana, what kind of metrics could be useful for this?
- How to create a script for generating traffic for experimentation purposes?
- Ideating about what metrics to use for hypothesis testing
- Creating test cases
- Can you explain how Prometheus scrapes metrics
- Can you review this README.md structure for clarity and completeness?
- Is this docker-compose.yml structure aligned with best practices?
- What information should be included in a README to help outsiders run the application?
